

Can you find delivery order No. 02485 here...?

**We can do it with just one click!**

How many times did you have to go to the archive and search for a delivery order, receipt, invoice or any other document signed by a customer?

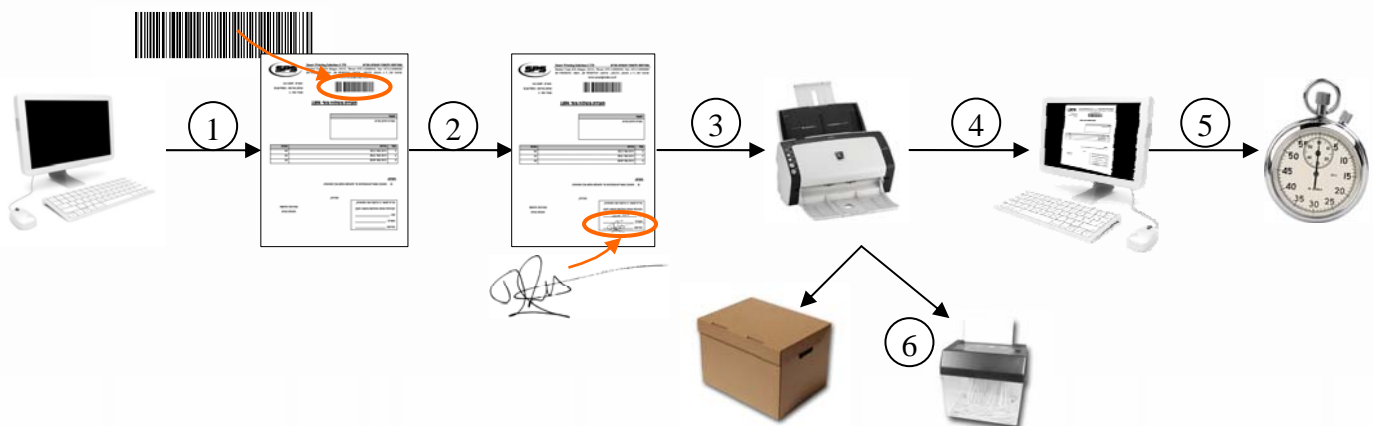

**With the innovative SMADAR software, all signed documents are waiting for you in just one click away.**

The documents will be scanned quickly and using unique software will be cataloged and saved in a digital archive.

## How does it work?

1. Special software will print a barcode on each document, based on the data of that document.
2. The customer signs the document.
3. The document is scanned to the computer.
4. The SMADAR software will recognize the barcode and digitally archive the document in the proper place.
5. When you need the document, all you have to do is open the SMADAR client and search for the document according to any of the fields. Then you can look at the document, print it, fax or email it with just one click.
6. (\*) During scan, you can digitally sign the document and then the scanned document gets an "original" status and the physical document can be shredded.

(\*) relevant only in countries where the digital signature law had passed.
