

System Description

The software allows you to control and track all of your windows print jobs printed in your organization, assists in reducing the amount of private print jobs on the expense of the business, and prevents printing of confidential information that can be used against the company.

Track and Control

The software prevents printing of confidential information that can be used against the company.

- The software adds a textual or barcode signs on the printed paper of data such as: user name, time and date, computer name, printer name, etc...
- No user will try to use internal documents against the company when he knows that his name is encrypted in it any it may return to him as a boomerang.
- The software allows you to add texts such as "company property", watermarks, company logos etc..
- Papers that were left un-attended in the printer can be checked, and the name of the person who printed it as well as the time and date can be checked.

Savings

The software assists in reducing substantially printing costs (toner and paper)

- Employees will not print private documents (personal studies, pictures, etc...) when the company logo is printed at the back.
- You can enforce a specific driver configuration on all prints jobs, and change configurations according to different parameters (by users, by printers, by document type, etc...)
- The software makes preprinted pages obsolete since you can print on blank papers and the logo will be added at print time (even from software that don't support adding graphic elements).
- You can enforce specific print characteristics to each user, even if they were not selected by the user when he sent the print job: e.g. you can force the printer to work in B/W mode even if the user sent a color print, or force the printer to print duplex, or from a specific paper tray.

Related Products

- Sentinel** is a Pull-Printing system allows you to release print jobs using your employee card, track and list all printouts and make reports and intersections. Using this system can lead savings of up to 40% in toner and paper costs, and makes sure that printed material is not left un-attendant in the printer. This system can be purchased with or without physical controllers. The Winsert system can process the print job (e.g. add company logo, and a barcode with the username) and then send it to the Sentinel database for further processing.
- SmartPrinter** is software that handles all Non-Windows print jobs. The software converts these print jobs from textual to graphical forms, fix font related issues, add templates and other graphical elements such as MICR fonts, Barcodes, etc...

System requirements

Working environment: Windows 2000 and above.

Printer types: Any windows printer, which has an EMF supported driver (almost any printer has at least one such driver).

The software works on Windows applications such as: Word, PowerPoint, Excel, Outlook, Internet, ERP, CRM and any other application that is printing graphics.
